

Provider Search is now live in Network Watch. Look up any provider and confirm network participation right in the dashboard, no API calls or code required.

WHAT'S NEW

Network Watch already lets teams browse and monitor the network catalog without writing a line of code. Provider Search extends that same self-serve experience down to the individual provider. Enter a ZIP code, then refine by provider name, specialty, or network to see exactly which providers are available in an area.

The tool is powered by the same Provider Search API that supports care navigation and shop-by-doctor experiences across 60+ platforms, so results in the dashboard match what the API returns, giving non-technical teams a trusted, code-free way to answer provider questions in seconds.

YOU'LL BE ABLE TO

Search by ZIP

Start with a ZIP code and set a radius to focus results on the right area.

Refine by name

Enter a full provider name to find a specific doctor or facility.

Filter by specialty

Narrow to cardiology, primary care, and hundreds of other specialties.

Confirm network status

Select a network to see which providers are in-network, and where.

Filter by type or NPI

Focus on individuals, organizations, or look up a known NPI directly.

View on a map

See provider locations and open a full profile with a single click.

WHY IT MATTERS

Self-serve

Sales, account, and operations teams get answers without waiting on engineering.

Trusted data

Same source that powers 23M+ in-network searches a year across the Ideon API.

Faster answers

Verify provider and network coverage in seconds, right where networks are monitored.

Available now for every Network Watch user

Access is enabled per account and per user. To turn on Network Watch and Provider Search for your team, contact your Ideon account manager.
